4 | Language model

# 1 | Overview

The project<sup>1</sup> uses JAX<sup>2</sup> throughout, with JaxMARL's<sup>3</sup> [1] StarCraft II-like SMAX as the environment. The agents are modelled using behaviour trees (BT). BTs are defined using a domain specific language (DSL) developed for the purpose. The ollama<sup>4</sup> library is used for the language modelling to map game states to human language and BTs, and vice versa.

## 1 | Overview (cont.)

- ☒ SMAX visual playback (`src/{plot,smax}.py`).
- ☒ BT function constructor (`src/{bt,atomics}.py`).
- ☒ BT based trajectory (`src/smax.py`). (yet to JIT compile)
- ☒ Domain specific language (`grammar.lark`).
- ☐ Implement the BTBank (`src/bank.py`).
- ☐ Augment SMAX environment.
- ☐ Language out (`src/llm.py`).
- ☐ Language in (`src/llm.py`).

## 2 | SMAX

- ▶ Extensive work on visual playback of trajectory fig. 1.
  - ⊗ Costum SMAX vizualization.
  - ⊗ Show unit type, team, health, attacks, and reward.
  - ⊗ Successfully runnning 10K+ parallel environments.

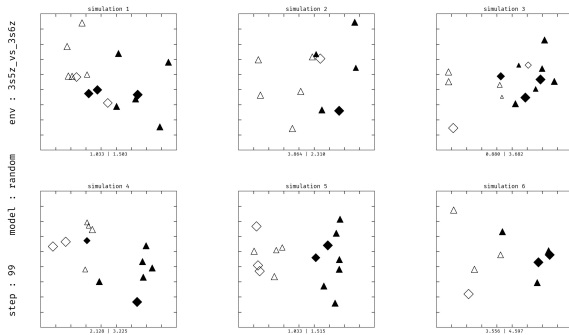

Figure 1: SMAX in parallel

### 3 | Behaviour trees

- ▶ BT is for now is located in a .yaml file.
- ▶ Beginning move to sqlite3 database.
- ▶ JAX based tick functions for node and leafs.
- ▶ Full traversal happens every tick, using logical operations.
- ▶ No JIT compilation yet.

### 3 | DSL grammar

```
1 tree      : sequence | fallback | decorator | atomic
2 atomic    : action | condition
3 nodes     : tree ( :: tree )*
4 sequence  : S ( nodes )
5 fallback  : F ( nodes )
6 decorator : D ( nodes )
7 action    : A ( STRING+ )
8 condition : C ( STRING+ )
```

### 3 | DSL example

```
1 F (
2   S (
3     C ( see enemy_0 ) :: A ( attack enemy_0 )
4   ) ::
5   F (
6     C ( see_enemy ) :: A ( find_enemy )
7   ) ::
8   A ( attack_enemy )
9 )
```

### 3 | Atomics

- ▶ Atomics are the leaves (actions/conditions) of the tree.
- ▶ They are JAX functions.
- ▶ Keep them simple and fast (complex behavior should come from the tree).
  - ▶ E.g. `move`, `attack`, `is_enemy`, `is_dead`, `n_in_range`, etc.
  - ▶ Maybe map out desired atomic functions.

## 3 | BTBank

- ▶ BTBank is a library for creating and running BTs.
- ▶ It is written in Python.
- ▶ sqlite3 is used to store the trees.

## 4 | Language model

- ▶ The language model is a transformer model.
- ▶ I/O architecture.
- ▶ The output is a sequence of tokens.
